

Title: Customer Churn & Retention Strategy

Subtitle: Data-Driven Insights for ABC Communications

Presenter: Abdullahi Ahmad, Junior Data Analyst

Title: The Cost of Customer Attrition

- Acquiring new customers is significantly more expensive than retaining existing ones.
- We analyzed 7,043 customer records to identify the core drivers of churn.
- ▶ **Objective:** Stabilize monthly recurring revenue by targeting high-risk segments

Customer Volume by Contract Type

- Month-to-Month contracts exhibit dangerously high churn rates.
- Locked-in customers (One-Year and Two-Year) demonstrate strong loyalty.
- *Risk:* Revenue is highly vulnerable to competitor promotions.

Customer Volume by Internet Service

- Fiber Optic services drive disproportionate churn compared to DSL.
- Customers are abandoning the premium tier at high volumes.
- *Risk*: Potential network reliability issues or prohibitive pricing structure.

- The median monthly bill for customers who churned is noticeably higher than for those who stayed.
- Higher costs strongly correlate with a higher likelihood of leaving.

Customer Tenure Distribution (Months)

- There is a massive spike in customer attrition within the very first few months.
- If a customer survives this initial period, churn drops dramatically.
- *Risk:* Wasted acquisition marketing dollars.

Strategic Retention Plan

- **Contract Upgrades:** Launch a targeted 10% discount campaign to transition Month-to-Month users to One-Year contracts.
- **Fiber Optic Audit:** Initiate an urgent technical and pricing review of the Fiber Optic service.
- **First 90-Days Program:** Overhaul new customer onboarding with dedicated support to prevent immediate drop-off.
- **Auto-Pay Incentives:** Offer a \$10 credit to switch from Electronic Checks to automated payments
